**The Data Dangers of Obama's Exchange**

Obama’s Exchanges are up and running, although they’re not running well, the backend payment and accounting system isn’t finished, and enrollment numbers can’t be trusted. But still, you might decide you want to see how it works, or how high your taxpayer-funded subsidy could be.

Let me remind you that curiosity killed the cat. Data security experts have testified under oath to Congress that healthcare.gov, the federal exchange, is so insecure it should be shut down. Hackers can not only get your data, they can enter your computer and take it over, monitor you through the webcam, listen to conversations, steal passwords and empty your bank account. Don’t yield to temptation. Stay away.
