Allowing Reinfection is Key to Controlling Covid

Professor Sunetra Gupta, an esteemed epidemiologist at Oxford, was interviewed by a British news program called TalkRadio. She was asked about herd immunity, which is when a large portion of the population becomes immune to a disease, making the spread of that disease from person to person unlikely. She said **a high level of herd immunity is “the only sustainable way of controlling an infection.”** She said **“the only way to maintain that is through reinfection.”** Let me repeat, the only way to maintain herd immunity is through reinfection, not through restrictions, which she said are “pretty much useless in controlling the spread of the virus.”

Thus, lockdowns are preventing herd immunity, allowing the virus to continue to spread.
