## Four Facts about the Covid Shot

I'm going to tell you four facts about the Covid Shot. First, three doctors from different countries have said they don't know when the messenger RNA stops making spike protein in the body and no one knows how to stop it.

Second, Dr. Deborah Birx, head of the White House Covid Task Force, said on Fox News, she always knew the vaccine would not stop infection.

Third, the CDC did not start analyzing injuries until 15 months after the shots began, and then they found more than 70,000 signals of potential cardiovascular harm.

Fourth, a Cleveland Clinic study found the more shots you get, the higher the risk of getting Covid.

These are four facts that you have probably not heard in the major media but you need to know.
