Clots are Like “Rubber Bands,” Says Pathologist

Fibrous clots are being found in the blood vessels of the living and the dead. Some morticians are putting pictures online; others are too afraid to talk about them publicly, but pathologist Dr. Ryan Cole has heard about these unusual clots from 50 morticians.

The clots may be due to spike protein. Dr. Resia Pretorius in South Africa, who studies blood, took platelets out of blood and added spike protein. Amazingly, proteins in the blood clumped together without platelets, the cells that bodies use to form clots. The post-mortem clots are long collections of proteins. They contain some blood cells, but they are not blood clots. Blood clots after death are like jelly. These clots, according to Dr. Cole are elastic, like rubber bands.

“Foot-Long Blood Clots” From mRNA, Says Pathologist Dr. Ryan Cole w/Dr Kelly Victory – Ask Dr. Drew,” YouTube, November 30, 2022:
