Use Listerine for Covid Prophylaxis

Does Listerine protect from Covid? I saw it in an early treatment protocol and I heard Dr. Richard Barlette say how Listerine can help because Covid doesn't start in the lungs. It starts in the mouth and nose and about five days later it travels into the lungs where the body often overreacts causing the dangerous cytokine storm, which leads to shortness of breath.

In March 2021, a report by researchers at Rutgers School of Dental Medicine found evidence that two types of mouthwash disrupt the COVID-19 virus under laboratory conditions, preventing it from replicating in a human cell. So listen up. Listerine and the prescription mouthwash Chlorhexidine disrupted the virus within seconds after contact. This is good news. Perhaps it's time to buy stock in Listerine!

“Two mouthwashes disrupt COVID-19 virus under laboratory conditions,”
