## Waiting is Deadly

**People are dying from Covid-19 because they wait.** They wait to get tested, to get results, and to see a doctor who often tells them to, “Go home, wait and see how you do.” Do not wait. Dr. Fareed says, “The earlier the treatment can be started . . . the better and more rapid the recovery.” Dr. DeMello says delay is deadly. Both say to start treatment within four days of symptoms.

**Timing is everything.** Early treatment is an insurance policy against death. Because the U.S. has illegally shut down access to ivermectin, it can take a week or more to get it. That’s way too long once you get sick. Talk to your family. Buy ivermectin now and keep it on hand in sufficient quantities for family and friends. Look for a compounding pharmacy in the US, or a supplier in India. Don’t wait.
