Where is Waldo (FAUCI)?

Where is Waldo? As part of the Left’s “November Pivot” away from Covid-19, which has put their mid-term election polling numbers in the tank, the government’s “face of Covid” has gone missing in action: Dr. Anthony Fauci. The one who falsely claimed the U.S. hasn’t funded deadly gain-of-function research. The one who in February 2020 told the former secretary of HHS that she should NOT wear a mask on an airplane because the tiny virus would pass through it. The one who weaponized his position to lead a fear-mongering federal campaign against the American people. The one who essentially claimed to be science himself.

Where is Fauci? He is apparently no longer useful. Expect a full investigation if Republicans take charge. Expect him to resign or try to plead the 5th.
