## Lab Finds High Levels of DNA in Covid Shots

Kevin McKernan, founder of Medicinal Genomics, has scary things to say about the Covid shot.

First, because the particle size in Moderna and Pfizer can't be controlled, it can kill human cells. He calls it a "toxic brew."

His lab sequenced the Pfizer shot and found 30 percent of its nucleic acid to be DNA. Some DNA is allowed, but the amount was 100-fold higher. He said, "It's way over the limits and [that] no one has said a peep about this is quite frightening." He is concerned because he says, "this DNA has signals in it that will get it into the nucleus." He wants other labs to duplicate his lab's work to see if they see what he sees.

Given the risk, think twice before getting another shot.
