Vaccine Effectiveness Plummet

Initially, claims of vaccine effectiveness were around 95%. People assumed that effectiveness rating was against getting Covid. Then experts said the shot was never intended to stop you from getting Covid, it was only to diminish symptoms.

Then studies showed that effectiveness dropped sharply after six months. Moderna dropped from 89% to 58%. J&J dropped to 13%. Pfizer fell from 87% to 45%. Now, the newly released Pfizer papers may indicate its rate is even lower. Today, too many vaccinated people are dying, getting terrible rashes, and becoming disabled. Vaccinated individuals are also being hospitalized and dying. Do you need this shot? Make an informed choice.

“Study shows dramatic decline in effectiveness in all three COVID-19 vaccines over time,” Melissa Healy, The Los Angeles Times, November 4, 2021: <https://lat.ms/3N9PSkl>

“Peter Doshi: Pfizer and Moderna’s ‘95% effective’ vaccines—we need more details and the raw data,” Peter Doshi, The BMJ Opinion (blog), BMJ, January 4, 2021: <https://bit.ly/3kWz2sS>

“Hospitalizations Among the Vaccinated are Rising,” Ralph Ellis, WebMD, November 19, 2021: <https://wb.md/3sqmvLY>
