Masking Children Did Not Stop COVID-19

A CDC observational study in March claimed masking school children limits COVID-19 infections. But then a study by two university researchers, was published in the *Lancet* medical journal. They found masking children had no effect on Covid infections. They had replicated the CDC study, but used far more school districts over a much longer time period, gathering six times as much data as the CDC study.

As a result, they found masking had no effect on Covid infections. In fact, they said observational studies like the CDC study are prone to bias, essentially leading to fake “science.” The CDC refused to publish their study. Are you surprised?

“SARS-CoV-2 Incidence in K-12 School Districts with Mask-Required Versus Mask-Optional Policies -- Arkansas, August -- October 2021,” Morbidity and Mortality Weekly Report, Centers for Disease Control and Prevention, March 11, 2022: <https://bit.ly/3tkojNQ>

“Revisiting Pediatric COVID-19 Cases in Counties With and Without School Mask Requirements -- United States, July 1 -- October 20, 2021,” Ambarish Chandra and Tracy Beth Hoeg, *Lancet*, May 25, 2022: <https://bit.ly/3xsTCbJ>
