## Long COVID Patients Suffer Needlessly

Long Covid is a litany of ongoing symptoms post-Covid, including severe fatigue and brain fog. A TIME article says there's no guarantee of recovery and no one fully understands how to cure Long Covid. This is not true.

Early treatment with ivermectin, colchicine, and Plavix saved most of Dr. Darrell DeMello's patients in India. But in the U.S., early treatment was shut down. As Dr. DeMello says, Covid patients with Long Covid have it because they weren't treated early or aggressively. Dr. DeMello has an effective protocol to clear the body of inflammation and clots. The I-RECOVER protocol from FLCCC.net is also effective. Patients may not find effective treatment for Long Covid at a clinic that never believed in early treatment in the first place and may need to go elsewhere to cure their Long Covid.
