## **Easily Find Official Vaccine Injury Data at OpenVAERS**

The U.S. system for vaccine injury reporting is called the Vaccine Adverse Events Reporting System, or VAERS. While it was intended to make vaccine injury reports simple and accessible, that's not the case. Some experts say reporting an adverse event – an injury or death – is time-consuming, frustrating, and confusing. There are five to six pages and technology glitches can get in the way. No wonder a 2011 Harvard Pilgrim Health Care study found that less than one percent of all injuries are ever reported.

About a year before Covid, a private group of individuals who have experienced vaccine injury created a web page called OpenVAERS to simplify public access to the data. It scrapes the data from VAERS and reports it without changes in a public-friendly format. Find it at [OpenVAERS.com](https://openvaers.com).
