More FDA Warnings About Covid-19 Vaccines

Covid-19 vaccines have problems. The Vaccine Adverse Events Reporting System has a broad list, but the FDA hasn't warned Americans about most of them. However, more official warnings are emerging. After it was impossible to ignore, the FDA said the Johnson and Johnson injection could cause, and was causing, deadly blood clots. Then the CDC held a hearing and the FDA issued a warning about heart inflammation from Moderna and Pfizer injections.

And now the FDA says the Johnson and Johnson injection can cause Guillan-Barre disease, with full or partial paralysis. In addition, the effectiveness of Pfizer's injection against symptomatic illness is down from 94 percent to just 64 percent. These injections were never meant to stop Covid; only to reduce symptoms. Now, people are becoming injured from the vaccines.
