Why No “Social Distancing” for Monkeypox?

Up to 62,000 people died during America’s 2019-2020 flu season, but no emergency was declared. Yet with only 15 people dead from monkeypox worldwide, a public health emergency has been declared.

This condition is spreading in the homosexual community. The CDC has issued a document called “Safer Sex, Social Gatherings, and Monkeypox.” It includes a drawing of two men sleeping together and says things that shouldn’t be paid for by taxpayers. Interestingly, the CDC only suggests they limit their sexual partners, not abstain from contact. Is this the same CDC that wanted us six feet apart and unable to say goodbye to our dying loved ones?
