Will Fauci Ever Be Held Accountable?

In good news, Dr. Anthony Fauci will retire in December. Given his outsized role in imposing lockdowns, killing the economy, deceiving Americans about the Covid shot, and letting the elderly die alone, that’s not soon enough. He should retire now. In response to his announcement, President Biden said Fauci has “touched all Americans’ lives with his work.” This is true, but it’s not good.

Dr. Fauci had the opportunity to do good. In 2020, he suggested chloroquine to treat Covid, but he later went on to bash this lifesaving drug and push the experimental genetic injection, leading to vaccine injury and death for hundreds of thousands. Will he ever be held accountable? It probably depends on who wins in November.
