**STUDIES: Covid Shot May Harm Immune System**

Millions were forced to take the experimental genetic jab—the Covid shot—or lose their jobs, their positions, their incomes, their education, medical treatment, or organ transplants. Now, major medical journals around the world are admitting the shot is dangerous to our immune systems. A study published in June 2022 says the injections may suppress the immune system causing heart damage, liver disease, blood clots, Bell’s palsy, and cancer in the vaccinated.

In February, the *Lancet* released similar results showing the vaccinated have lower immune function than the unvaccinated just eight months after two injections. A rapid resurgence in cancers is also occurring. I hope none of this happens to you but if you’re unvaxxed, think twice before you take the shot.
