**UK: No Vax for Pregnant or Breastfeeding Women**

The British government issued a warning against the Pfizer Covid shot for women who are pregnant, might become pregnant, or are breastfeeding. There’s an absence of reproductive toxicity data because the shot was so rapidly developed, thus there’s insufficient evidence that the vaccine is safe for pregnant women. The government says “Women who are breastfeeding should also not be vaccinated.”

Naomi Wolf, whose group of experts is scouring Pfizer’s research reports said 44% of the 50 pregnant women in the clinical trials lost their babies. But a fact-checking group says that’s not true and now the post has been taken down. Whatever the truth is about Pfizer’s data, England says no vaccines for pregnant or breastfeeding women.
