**Will You Follow 8 “Blind” Mice?**

People who got the Covid shot are getting Covid, getting hospitalized with Covid, and dying from Covid. Now the FDA has approved a booster never tested on humans. The only data it received came from eight mice. And those mice were never exposed to the virus after the shot. Did they get sick? Did they die? We don’t know. Human clinical trials do not start until sometime this month.

Yet the head of the White House Covid task force, during an interview invoked God to push the shot. He said, “God gave us two arms – one for the flu shot and the other for the Covid shot.”

More than 175,000 hospitalizations related to the Covid shot have been entered into the FDA’s adverse events database. Are you going to risk the shot or prepare yourself with early and effective treatment?
