Natural Immunity Soars Above Vaccine Immunity

Let's discuss immunity to SARS-CoV-2. First of all, the immunity that you get from the vaccine is only to the spike protein, the pointed parts around the virus. The immunity you get from having the virus — natural immunity— is to the entire virus, spikes and all. This may be why a huge Israeli study found that natural immunity is much stronger than vaccine-induced immunity.

Those injected with the Pfizer vaccine were 13 times more likely to get Covid-19 after vaccination than the already infected were likely to get reinfected. The vaccinated also had a seven-fold increased risk of symptomatic disease and a greater risk to get hospitalized for Covid-19 than those who'd previously been infected with the virus.

“Comparing SARS-CoV-2 Natural Immunity to Vaccine-induced Immunity: Reinfections Versus Breakthrough Infections,” Sivan Gazit, MD, MA, et al, medRxiv (preprint), August 24 ,2021: <https://bit.ly/390XqUw>

“Does SARS-CoV-2 natural infection immunity better protect against the Delta variant than vaccination?” Jocelyn Solis-Moreira, News Medical Science, August 30, 2021: <https://bit.ly/3nmxcEj>
