## Ohio Court Requires Ivermectin Be Given

An Ohio judge ordered a hospital to give ivermectin to a patient for three weeks. It was a good ruling, but probably too late. He'd already been on a ventilator for 22 days. Ivermectin is best given in the early days, when symptoms first begin. It stops viral replication so the deadly cytokine storm in the lungs and widespread clotting never begin.

But the mainstream media reacted in horror, as if ivermectin were an unproven, dangerous medication, a pill only for animals. But ivermectin has been approved for human use for over four decades, its creator received a Nobel prize in 2015, it's been called a "wonder drug." Legislators should make ivermectin available over the counter so the "vaccine or nothing" crowd cannot stop you from trying to save your own life when doctors refuse early treatment.
