**Early Treatment: Why Monkeypox and Not Covid?**

Between April 27 and June 24, there were 528 monkeypox infections in 16 countries—98% in gay men. By September 13, only 19 people had died around the world. But about four months after it began, a clinical trial to evaluate a treatment was begun, funded by Dr. Fauci’s agency.

Compare that with Covid. Between March 1 and April 25, 2020, more than 56,000 people died, but the U.S. government blocked early treatment for Covid and no serious study of effective early treatment was initiated. As a result, hundreds of thousands of people died, and millions now have long Covid. Why early treatment for fairly benign monkeypox and no early treatment for lethal Covid?

Presented daily by Twila Brase, President and Co-founder Citizens’ Council for Health Freedom.

*The Health Freedom Minute is now heard in 48 states: Mon-Fri on more than 850 radio stations nationwide*
