Can Schools Safely Reopen?

Should schools reopen? According to the CDC in early April, “Hospitalization was most common among pediatric patients [less than] one year [of age] and those with underlying conditions.” Meanwhile, five studies show that “Children appear significantly less likely to acquire COVID-19 than adults when exposed” and there are significantly fewer infected children than adults.

So, how deadly is COVID for school children? Between Feb 1 and July 8, only 14 children between the ages of five and 14 have died from COVID-19. Compare that with the nearly 5,600 children at those ages who died from all causes in 2017. Thus, children are not the primary victims of COVID-19.

Presented daily by Twila Brase, President, Citizens’ Council for Health Freedom.

The Health Freedom Minute is now heard in 47 states:
Mornings M-Th at AM1280 (The Patriot) in MN and 91.5 AM WHKC (FreedomFM) in OH, afternoons on American Family Radio, and daily on the CSN network and Bott Radio Network.
