Will Covid-19 Ever Disappear?

Will Covid-19 ever disappear? According to the CDC, the 2009 H1N1 swine flu virus, “continues to circulate as a seasonal flu virus” causing illness, hospitalization, and deaths worldwide.

Meanwhile, SARS-CoV-1, or the Severe Acute Respiratory Syndrome virus that led to 774 deaths, was first noticed in November 2002 but disappeared by July 2003.

Today’s SARS-CoV-2 is a cousin to SARS-CoV-1. Perhaps the good news is that H1N1 is not news because most of us are immune, and SARS-CoV-1 disappeared quickly before a vaccine could even be created. Perhaps that will happen to SARS-CoV-2, today’s COVID-19.

“2009 H1N1 Pandemic (H1N1pdm09 virus),” Centers for Disease Control and Prevention, Last reviewed June 11, 2010: https://bit.ly/31pz3LW
