**Don’t Fear the Rise in Cases**

How afraid should you be about COVID-19 cases on the rise? So-called ‘herd immunity’ requires 50 to 70 percent of the public to be infected. Thankfully, studies show that there are 10 to 85 times more people infected than confirmed cases. That’s good news, but we’ll never know who they are. Some have innate immunity. They’ll never test positive.

Yet, talk about flattening the curve has disappeared. People now want to control the virus through one shutdown after the next until there’s a vaccine. That’s not possible.

We cannot stop this itsy-bitsy virus. But we can kill the economy, jeopardize lives, incomes, and jobs. Keep your distance but don’t fear the cases. The more cases we have, the sooner the virus disappears.

“**Even with Vaccine, ‘We will be dealing with this forever’”** Virus experts Frieden, Osterholm,” Eric Rosenbaum, CNBC, July 28, 2020:
