Will Covid-19 Vaccine Backfire?

Russia claims to have a Covid-19 vaccine but is it true? Dr. Teresa Deisher, an adult stem cell researcher said in a recent video, "There hasn't been a successful vaccine made against a coronavirus yet."

In 2012, a study on an attempt to develop a coronavirus vaccine is also not reassuring. The researchers found that the vaccine made the virus more virulent in the mice who had been vaccinated. Since Dr. Fauci's federal department funded this study, he knew what he was talking about when he told the U.S. Senate that the vaccine could backfire and strengthen the virus.

Nevertheless, vaccine proponents are clamoring for a national vaccination mandate. The American public hasn't yet been told of how dangerous that could be.

"Immunization with SARS Coronavirus Vaccines Leads to Pulmonary Immunopathology on Challenge with the SARS Virus," Chien-Te Tseng et al, PLoS One, April 20, 2012:
