Too Many GOP Support National Patient ID

Act today. Many members of Congress, including Republicans, want to impose a National Patient ID on all Americans, creating a national medical records system that links all your medical records together wherever they are or however sensitive the data is. There will be no escape—and you could not get care without this number.

When the U.S. House voted to fund the development of a National Patient ID, officially called a Unique Patient Identifier, a shocking 41 Republicans voted yes.

Senator Rand Paul is trying to stop the National Patient ID, and he needs your help. Call your Congressman and U.S. Senator today and tell them to stop the National Patient ID. Stop the National Patient ID.
