Conflating COVID Deaths with Flu Deaths

The CDC is deceiving the public. They're combining pneumonia, influenza and COVID data, into what they call a PIC chart. The data behind the chart has no column solely for COVID deaths. There's only a column for "% of Deaths due to Pneumonia, Influenza or COVID."

The blogger and data expert, Ethical Skeptic, says this is "a scheme...to conflate the upcoming 2020 influenza and pneumonia season as being one-in-the same as the tail of the COVID-19 outbreak." It makes it look like COVID deaths are not coming down. It also artificially boosts COVID deaths beyond the 5.7 percent epidemic level, allowing the lockdowns to stay in place. The Ethical Skeptic calls this a crime against humanity. Why is the CDC combining the data?
