Hospital Charge 947 Percent Higher

Would you rather pay $147 or $1,500? A woman found one blood test cost $1500 with insurance or $147 without insurance. The hospital charge was 947 percent higher than the charge from a direct primary care clinic.

Is this why premiums are so high? Hospitals overbill and health plans overpay. Sometime I'll explain how sky high medical prices mean bigger health plan profits under Obamacare. But for now, just know that direct primary care practices are low cost because they only take cash, check or charge. Find an affordable, patient-friendly clinic at JointheWedge.com.
