Two Examples of Why Government Databases are Unsafe

Your data is not safe with the federal government. Last summer the federal Office of Personnel Management said 1.1 million fingerprints were stolen by China. Now we’ve learned it was actually 5.6 million fingerprints. These are the fingerprints of former and current federal employees. We can’t change a fingerprint like a password, so how will China use them?

In addition, a federal watchdog has reported that the $110 million database that holds all sensitive information on past and current Obamacare enrollees had 135 security flaws, leaving millions of people vulnerable to outside hackers. So why is the Republican Congress pushing to connect all of our medical records and put them on the grid?

Presented daily by Twila Brase, President, Citizens’ Council for Health Freedom.

The Health Freedom Minute is now heard in 41 states: Mornings M-Th at AM1280 (The Patriot) in MN and 91.5 AM WHKC (FreedomFM) in OH, afternoons on American Family Radio, and daily on the Bott Radio Network.
