The Unvaccinated Vaccinated

Welcome to the Health Freedom Minute. This is Twila Brase, president of Citizens’ Council for Health Freedom.

Health officials say that flu vaccinations work 70 to 90 percent of the time. But University of Minnesota researchers have dropped that estimate to only 59 percent. The H1N1 vaccine is not much better at 69 percent.

The most common flu shot had no noticeable impact in four out of the 12 flu seasons studied.

Vaccine manufacturers have a cozy, lucrative relationship with the federal government. They are often protected from liability for vaccine-related injuries or death. In addition, our tax dollars pay for a significant amount of vaccine production. Perhaps it’s time to rethink tax-payer funded flu vaccinations that leave almost half of the vaccinated actually unvaccinated.
