What Does Quality Really Mean?

What is quality in health care? It’s whatever the government says it is. It’s not how well you do, or if your care is individualized. Quality is defined by a check list. There are five initial quality measurements. They include a certain blood pressure level and a certain blood sugar level. They also include a low cholesterol level, taking aspirin if recommended, and not smoking.

As you can see, “quality” is defined by how you eat and you act and according to your compliance. Your doctor’s pay can be docked according to your choices and your conditions. Patients with difficult conditions or poor compliance may soon feel quite unwelcome.

Presented daily by Twila Brase, President, Citizens’ Council for Health Freedom.

The Health Freedom Minute is now heard in 37 states: Mornings M-Th at AM1280 (The Patriot) in MN and 91.5 AM WHKC (FreedomFM) in OH, afternoons on American Family Radio, and daily on the Bott Radio Network.
