Is Science Broken?

Ten years ago a statistician said, “Most published research findings are false.” He showed only one-third of the results of highly cited original clinical research studies could be replicated. Another group of researchers could only replicate the findings of six out of 53 animal-based cancer studies. As a result, some say 85 percent of biomedical research dollars are being wasted every year. So why is Congress trying to increase research funding?

A group of university scientists say academic pressure to produce striking results for publication has overridden the drive for real discoveries. So the next time you’re offered a new medical treatment, ask more questions.

Presented daily by Twila Brase, President, Citizens’ Council for Health Freedom.

The Health Freedom Minute is now heard in 41 states: Mornings M-Th at AM1280 (The Patriot) in MN and 91.5 AM WHKC (FreedomFM) in OH, afternoons on American Family Radio, and daily on the Bott Radio Network.
