Private Sector Creating National Patient ID

A company called CrossChx is building what they call the “Internet of Healthcare.” One leader of the initiative says they are building it “to seamlessly connect information, creating what you can think of as a single IP address for every patient.” ENDQUOTE.

CrossChx has raised $35 million, is working with two former federal public health bureaucrats, and has created 50 million unique patient IDs through their cloud-based electronic sign-in for patients, found at hospitals and clinics nationwide. In short, private industry is building Hillary’s national unique patient ID system, which Congressman Ron Paul prohibited government from doing 17 years ago. Are you worried?
