What's the Root of Unaffordable Prices?

In today’s debate over unaffordable health insurance, have you considered the root cause? After all, the only way to solve a problem is by getting to the bottom of the problem. Everything else is like putting a band-aid on a festering wound that won’t heal.

The root cause is third-party payment. We’ve had doctors and patients for centuries. The problems began when we put government payers and managed care payers between patients and doctors. Insurance used to be insurance. It didn’t “manage” the patient and the doctor. It paid the patient, who paid the doctor and the hospital. We launched The Wedge of Health Freedom to put patients and doctors back together again at an affordable price without interference from third-party payers. JointheWedge.com
