Don't Genetically Alter Humankind

China has begun using human embryos from in-vitro fertilization clinics to experiment with genetic splicing. They want to eliminate from one-cell embryos certain genes that cause medical disorders. This would change the genes inherited by the next generation leading to controversial designer babies, human enhancement and potentially undesirable consequences.

Two experts call this process eugenics. They say one generation eliminating or enhancing certain human characteristics will physiologically impact future generations forever. The experts call for genome alteration to be outlawed, for a moratorium on modification of humankind and an international discussion.

Presented daily by Twila Brase, President, Citizens’ Council for Health Freedom.

The Health Freedom Minute is now heard in 41 states: Mornings M-Th at AM1280 (The Patriot) in MN and 91.5 AM WHKC (FreedomFM) in OH, afternoons on American Family Radio, and daily on the Bott Radio Network.
