Are You Ready to Be Chipped?

An executive at a Russian IT security company just chipped himself. He had a NFC or Near-Field Communication chip embedded in his hand. NFC is like the RFID technology used to pay tolls without having to stop, but NFC chips only exchange data in a 4-inch range. The executive traded in his security pass and hopes to eventually use the chip to pay for all his purchases.

Given that Congress is proposing chip-enabled smart cards for Medicare and Medicaid, will government move to chip recipients? What would you say if they offered you lower premiums if you agreed to put a chip in your hand?

“It’s more than the wallet-killer: Everything you need to know about NFC,” Joe Donovan, Digital Trends, November 6, 2014.

Presented daily by Twila Brase, President, Citizens’ Council for Health Freedom.

The Health Freedom Minute is now heard in 41 states: Mornings M-Th at AM1280 (The Patriot) in MN and 91.5 AM WHKC (FreedomFM) in OH, afternoons on American Family Radio, and daily on the Bott Radio Network.
