Refuse EHR System's Unique Patient ID

Did you know the HIPAA law requires you to have a unique national patient ID card? But another law prohibits any funding for it. Now a private company has created a unique 16-digit identifier for patients. To implement it, the company is working with two of the nation’s largest electronic health record systems, which received billions of dollars from taxpayers through Obama’s EHR mandate.

The ID system requires patients to scan two fingerprints and their face into the system. The company hopes your doctors and nurses will convince you to accept the patient ID and the scanning of your face and fingers using fraud prevention as their rationale. But this could lead to a national patient ID. Please refuse.

Presented daily by Twila Brase, President, Citizens’ Council for Health Freedom.

The Health Freedom Minute is now heard in 41 states: Mornings M-TH at AM1280 (The Patriot) in MN and 91.5 AM WHKC (FreedomFM) in OH, afternoons on American Family Radio, and daily on the Bott Radio Network.
