Will You Take Action to Stop Patient Profiling?

Today we honor those who died to save the lives of others the day terrorists attacked America 14 years ago. Many people call that day 9-11, but I think that day was chosen because it could also be called 9-1-1, the number you call in an emergency.

Today our enemies may be our own government, and the all-controlling Obamacare law. Clinics are being pressured to collect data on patient income and neighborhood. The plan is to geocode all medical records and combine patient data with Census data and social media to build profiles on citizens and monitor physicians. They’re not asking for your consent. Freedom and surveillance cannot coexist. Let me know if you decide to take action in your state to stop the profiling.
