Coercive FluSafe Campaign

I found a flyer at the Minnesota State Fair called “FluSafe.” Its tagline was “Vaccinating staff, protecting patients.” This may sound innocent, but it’s not. The health department flyer will make people afraid of hospitals and clinics where the staff are not fully vaccinated. The flyer is meant to coerce compliance. Hospitals seeking good scores in the FluSafe program may threaten nurses and doctors with termination for refusing to submit to vaccination. But vaccinations are private decisions and studies show flu vaccine is not even the right vaccine 41% of the time. Why are taxpayer dollars being used for such propaganda?
