| ANSWER: “Integrated EHDI data system (i.e. the EHDI program has a separate data system from other state programs, but contains all screening, diagnostic, service data in one system. The EHDI data system may obtain uploads from other systems). The EHDI program has been in discussion with vital records to be able to link EBC data with both hearing and metabolic results. WY is expecting a software developer working with Part C/Part B will develop a system for matching vision screening results with hearing screening results. An immunization registry is currently being implemented through Vital Statistics. Currently there is no birth defects registry but does have a lead screening tracking system.” |
