Government Making You Involuntary Research Subject

Welcome to the Health Freedom Minute. This is Twila Brase president of Citizens’ Council for Health Freedom.

You have been classified as an involuntary subject of government research. Did you see the newspaper notice?

The U.S. government commissioned a national study using progesterone for traumatic brain injury. If you get a head injury, you could be targeted. Despite known risks, your consent is not required.

To avoid being a research rat you must opt-out using a National Opt-out Registry before you have a head injury, but the website says that’s no guarantee. Or you can wear a special opt-out bracelet 24/7 for the next four years. Thus, to avoid government intrusion in your medical treatment, you must register your protest and be marked.

Three Twin Cities hospitals are participating in the study.

Find the opt-out link at healthfreedomminute.net.
