Dangerous Medicine

Welcome to the Health Freedom Minute. This is Twila Brase president of Citizens’ Council on Health Care.

Socialized medicine is dangerous. In England, cancer survival rates are much lower. For example, the U.S. has the highest survival rate for prostate cancer at 91.9% while the Brits have only a 51.1% survival rate.

National health care is now an election issue in England. The Conservatives promise $1 billion pounds to give patients access to cutting-edge cancer treatment.

The Tories promise 200 million pounds for drugs that have been rationed away by England’s rationing body, the National Institute for Health and Clinical Excellence, euphemistically known as NICE.

Once America’s version of NICE gets off the ground—the Independent Medicare Advisory Board enacted with ObamaCare—watch U.S. survival rates plummet.
