# Health Freedom Minute

December 16, 2014

## **Protect Your Privacy Refuse to Enroll**

Data security problems continue in the Obamacare exchanges. Last year four security experts said the healthcare.gov website wasn't secure – in fact it wasn't even built on a platform of data security – and three of those experts said it should be shut down. All of them refused to use it. Even President Obama didn't use it so he wouldn't have to disclose his social security number and income.

Now we learn that a key IRS system for calculating Obamacare fees for insurers has security weaknesses. A heavily-redacted 44-page report says there are “25 critical and major failures and errors.” The security of your private data is just one reason to refuse to enroll in Obamacare.
