Is Your Ivermectin Counterfeit?

In December 2021, Australia's version of the FDA warned that three imported ivermectin products were counterfeit. Listen carefully: Iversun-12, Covimectin-12 and Ivilife-12.

The agency claimed the 12 mg tablets contained less active ingredient than advertised on the label. However, the agency gave no specifics. Did the pills only have 11 mg instead of 12? Why did the agency not mention the amount? Are they making a big deal out of a tiny reduction? We don't know.

But we do know Australia went full-tyrant during the Covid crisis. Whatever the truth is, if you want to feel more certain that your ivermectin is accurately dosed, use an American compounding pharmacy.

"TBA warns about imports of ivermectin," Therapeutic Goods Administration, Department of Health and Aged Care, Australian Government, December 14, 2021: bit.ly/47CuCxt
