Sudden Cancer in the United Kingdom

Cancer has struck the British monarchy. King Charles was found with “a form of cancer” in January. Princess Kate Middleton was found with cancer in March. Is this related to the Covid shot? Kate got her first shot in May of 2021. In December 2021, then Prince Charles urged everyone to get the Covid shot. Interestingly, I can find no articles about Kate getting a second shot. However, it is likely that both have had at least one shot.

Could it be turbo cancer? Many oncologists are talking about the sudden, rapid-growing cancers that are being found in the vaccinated, especially the young. Once these so-called turbo cancers are found, they're often too far along to be stopped. Let's pray the royals do not have turbo cancer.
